

NEED HELP WITH FISCAL RULE DESIGN?

John Merrifield and Barry Poulson are available to get you over the hump.

You can go one of three routes: 1) make a detailed request – we'll provide a low price; 2) specify the amount you have available, and we'll provide the most important start-up / reorientation content, at least, and add data collection and simulations from there, depending upon how much you can spend; or 3) Our Package deal: \$5000 for start-up / orientation, plus specification of the optimal fiscal rule (TEL – cap on spending growth) for your state, including some simulations to specify the rule's fiscal and economic impacts, plus some sensitivity analysis to demonstrate the effects of some key design options; for example, the cap, budget stabilization fund rules, and whether the base for the next year's cap should be the current year's spending, or the current year's spending cap. We will testify, once each, via ZOOM.
